## PREDGOVOR

Zbirka podaja v strnjeni obliki tiste formule za vektorje in za tenzorje 2. reda (kvadratne matrike), ki se pogosto rabijo. Namenjena je uporabniku, ki pojme že pozna, tako da mu zadošča jo prav skopa besedna pojasnila. Pisava brez komponent, ki ni odvisna od izbire koordinatnega sistema, naj vzpodbuja k nazorni predstavi.

Znamenja se večji del ravna po prevladujoči rabi v fizikalni literaturi. Skalarni, vektorski in tenzorski produkt dveh vektorjev zaznamujeva s  $\cdot$ ,  $\times$  in  $\otimes$ . Produkte s skalarji pa piševa brez ločila in ravno tako matrične produkte (tenzorja s tenzorjem in tenzorja z vektorjem). Izogibava se razlikovanja "vektorjev vrstic" in "vektorjev stolpičev".

Omejila sva se na 3-dimenzionalni evklidski prostor; vendar se bo uporabnik sam znašel z nekaterimi posplošitvami. V več dimenzijah zavržemo vektorski produkt, medtem ko ohranimo vse ostalo. V kompleksnih prostorih je treba npr. pri drugem faktorju skalarnega produkta in pri komponentah adjungiranega tenzorja (ki se ne ujema več s transponiranim tenzorjem) vstavljati konjugirano kompleksne vrednosti, takole:

$$\vec{u} \cdot \vec{v} = \sum_i u_i v_i^* = (\vec{v} \cdot \vec{u})^* , \quad A_{ij}^\dagger = A_{ji}^* .$$

V Hilbertovem prostoru, kjer tenzorjem ustrezajo operatorji, pišemo po navadi  $(\vec{u}, \vec{v})$  ali  $\langle \vec{v} | \vec{u} \rangle$  namesto  $\vec{u} \cdot \vec{v}$ .

Izmed uporabljenih virov naj omeniva naslednje:

E. Madelung: Die mathematischen Hilfsmittel des Physikers. Springer, Berlin 1957.

G. A. Korn, T. M. Korn: Mathematical Handbook for Scientists and Engineers. McGraw-Hill, New York 1968.

P. M. Morse, H. Feshbach: Methods of Theoretical Physics. McGraw-Hill, New York 1953.

Rada bi se zahvalila Egonu Zakrajšku za temeljit pregled rokopisa in za nasvete, s katerimi nama je pomagal odpraviti več nedoslednosti.
